Abstracts

According to our (Global Info Research) latest study, the global Robotics Data Collection Kit and Platform market size was valued at US\$ 620 million in 2025 and is forecast to a readjusted size of US\$ 3174 million by 2032 with a CAGR of 26.2% during review period.

The Robotics Data Collection Kit and Platform is an end-to-end ecosystem that combines physical hardware acquisition devices (such as cameras, LiDAR, force/tactile sensors, and motion trackers) with software frameworks (including data management, annotation, cleansing, simulation, and training platforms) to enable high-quality, repeatable real-world data collection. These datasets can be used to train deep learning models, reinforcement learning strategies, and Embodied AI systems, supporting multi-device coordination, task scheduling, and large-scale data workflow management. Through a hardware-software integrated solution, the system forms a closed loop from data acquisition to annotation, management, and training, providing critical infrastructure for research, industrial automation, intelligent logistics, simulation, and autonomous robot training. The estimated gross margin for robotics data collection kits and platforms in 2025 is approximately 30%.

As intelligent robotics rapidly expand across manufacturing, logistics, research, and service sectors, the demand for Integrated Robotics Data Collection Kits and Platforms continues to grow. End-to-end hardware-software integrated solutions significantly enhance the quality and reusability of real-world data, providing critical support for training deep learning models and Embodied AI systems. In addition, multi-device coordination and large-scale data workflow management capabilities are driving enterprise investment in integrated data collection platforms. Although industry

standards are still evolving, the increasing reliance of AI algorithms on high-quality, multi-modal data suggests that this market will experience steady growth and remain a core infrastructure for robotics R&D and intelligent automation in the coming years.
