Robotics in Data Centers refers to robotic systems deployed in data center infrastructure construction, equipment installation, daily operations, maintenance, and intelligent management processes. These robotic systems utilize autonomous navigation, machine vision, artificial intelligence, sensor fusion, and automation technologies to perform tasks such as server handling, rack installation, equipment inspection, asset management, internal logistics, fault detection, and maintenance assistance. Robotics in Data Centers mainly includes autonomous mobile robots (AMRs), automated guided vehicles (AGVs), server rack handling robots, data center inspection robots, and AI-powered maintenance robots. With the rapid expansion of cloud computing, artificial intelligence (AI) data centers, and high-density GPU computing clusters, the demand for automated, unmanned, and highly reliable data center operations continues to increase, making robotics an important component of next-generation data center infrastructure automation.

In 2025, the global production of Robotics in Data Centers refers reached 30,000 units, with a unit price of $100,000 per unit and a gross profit margin of 35%.
