## Abstracts

The global Robots-as-a-Service (RaaS) market size is expected to reach \$ 6088 million by 2032, rising at a market growth of 14.6% CAGR during the forecast period (2026-2032).

Robots-as-a-Service (RaaS) is a business model that provides robot hardware, software, and a full range of services on demand. Unlike traditional robot purchase models, RaaS allows businesses to use robot equipment through leasing or subscription models and pay based on usage or workload. RaaS solutions typically include hardware leasing, software support, cloud monitoring, data analytics, regular maintenance, and technical support, providing businesses with flexibility, low risk, low upfront investment, and access to the latest technology and full lifecycle operational services. The RaaS model reduces the initial investment cost of robot equipment, allowing businesses to use robots as a service without having to invest huge sums in high equipment costs or technical maintenance. The global Robots-as-a-Service (RaaS) gross margin is projected to be approximately 35% in 2025.

With the growing demand for automation in the global manufacturing and logistics industries, RaaS (Range as a Service) robotic solutions have become an important option for SMEs to upgrade productivity. Especially in logistics, warehousing, and production line automation, RaaS provides flexible and low-cost automation tools. The continuous development of artificial intelligence, machine learning, autonomous navigation technology, and cloud computing has enabled robot services to extend beyond hardware to include value-added services such as data management, remote control, and technical support. RaaS allows businesses to quickly adopt these latest technologies and avoid the risks of technology updates. With the popularization of the sharing economy and on-demand service models, RaaS offers flexible and scalable

services, allowing businesses to rent robots and technical services based on actual needs without incurring high capital expenditures. While RaaS reduces initial investment through leasing, the costs of high-end robotic equipment and ongoing maintenance remain high. Operators need to ensure that leasing prices are attractive to customers while covering costs and achieving profitability. RaaS providers need to ensure equipment and platform compatibility, as well as data security and privacy protection, which places high demands on entering sensitive industries such as healthcare and logistics. Many traditional manufacturing companies remain hesitant about the on-demand leasing business model, especially regarding long-term leasing and technical maintenance services. Market education remains one of the challenges for RaaS growth. Smart manufacturing is gradually becoming central to the transformation of global manufacturing, and more and more SMEs are accelerating the automation of their production lines through RaaS. With the increasing demand from e-commerce and warehousing logistics, the robot leasing market is showing strong growth.
