According to our (Global Info Research) latest study, the global RoboVan Domain Control Unit market size was valued at US\$ 61.04 million in 2025 and is forecast to a readjusted size of US\$ 351 million by 2032 with a CAGR of 25.4% during review period.

The RoboVan Domain Control Unit is the core computing and control platform for unmanned logistics vehicles. It integrates multi-sensor data fusion, path planning, and decision control algorithms, enabling autonomous driving in closed environments, logistics bases, and road conditions. It processes real-time perception data from LiDAR, cameras, and millimeter-wave radar, combining high-precision positioning with vehicle dynamic control to achieve core functions such as environmental modeling, motion planning, and execution control. Domain controllers typically support safety redundancy, functional safety standards, and local inference capabilities, providing stable, safe, and scalable autonomous driving capabilities for unmanned logistics vehicles. In 2025, the global production of RoboVan Domain Control Unit was approximately 67,500 units, with a unit price ranging from approximately \$278.87 to \$1408.45, an average price of approximately \$878.87 per unit, and a gross margin of approximately 35.61%.

With the accelerating wave of global supply chain digitalization and logistics automation, the market for autonomous driving domain controllers for unmanned logistics vehicles is entering a phase of explosive growth. Logistics parks, industrial bases, ports, and warehousing scenarios are demanding efficient, safe, and all-weather operation from autonomous vehicles, driving rapid growth in demand for high-computing-power domain controllers. Meanwhile, rapid breakthroughs in core technologies such as multi-sensor fusion, AI inference, and real-time decision-making have laid the foundation for improved controller performance and cross-scenario adaptation. The increasing number

of autonomous driving projects in airports, manufacturing parks, and logistics hubs globally has driven mass production demand for domain controllers as core components of standardized autonomous driving platforms. At the policy level, the support and standards for autonomous driving and intelligent logistics in various countries are gradually improving, paving the way for standardized market applications. Despite the huge market potential, technological barriers and supply chain collaboration remain major challenges for industry development. Autonomous driving systems for unmanned logistics vehicles have extremely high requirements for hardware computing power, software algorithms, and functional safety. The long certification cycle and high compliance costs for high safety levels raise the entry barrier for companies. Furthermore, the differences in control strategies and algorithms across different scenarios require products to have stronger adaptability, which places higher demands on the chip R&D and algorithm engineering capabilities of SMEs. Secondly, the tense global supply chain, core chip constraints, and cross-border compliance issues may all bring uncertainty to manufacturing costs and delivery cycles, affecting the pace of industry advancement and large-scale implementation. At the downstream application level, the demand for autonomous driving domain controllers for unmanned logistics vehicles shows a clear stratification. Applications in closed parks and semi-open scenarios have already achieved large-scale deployment, such as airport cargo, industrial bases, and port logistics. These scenarios have the most prominent requirements for closed-loop safety and high reliability. Pilot projects for urban last-mile delivery and open road logistics are rapidly increasing, demonstrating significant efficiency advantages, especially in high-frequency logistics tasks such as express delivery and cold chain distribution. In the future, with further clarification of relevant regulations and improvement of infrastructure (such as high-definition maps and vehicle-to-infrastructure communication), the operating scope of autonomous logistics vehicles will continue to expand, extending from closed scenarios to urban and intercity logistics, further driving the growth of the domain controller market.
