Abstracts

The global Rocket Distress Flare market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The market outlook for rocket distress flares is positive due to the increased emphasis on safety regulations and the growing demand for marine safety equipment. With the growing number of recreational vessels around the world, the importance of distress signaling devices has increased. Various regulatory bodies such as SOLAS, USCG, and Transport Canada mandate the use of rocket distress flares on boats of certain sizes. The increasing adoption of distress signaling devices in developing countries also offers growth opportunities for the market. Additionally, advancements in technology have led to the development of more efficient and environmentally friendly rocket distress flares, which further fuel the growth of the market.

The Rocket Distress Flare is a pyrotechnic device that is used to signal a distress call. The flare is shot into the air from a handheld launcher or a boat and produces a bright and colorful light that is visible from a distance. The signal alerts search and rescue teams that someone is in distress and needs assistance. These flares are a vital tool in emergency situations at sea, where they can be used to attract the attention of other vessels, aircraft, or rescue personnel.
