According to our (Global Info Research) latest study, the global Rodless Electric Cylinder market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A rodless electric cylinder is an electric device used to achieve linear motion without the need for a piston rod commonly found in traditional hydraulic or pneumatic cylinders. Unlike traditional hydraulic or pneumatic cylinders, the design of the rodless electric cylinder does not have a hollow piston rod. Instead, it combines an electric motor and a lead screw to push the load for linear motion through the rotation of the electric motor.
