According to our (Global Info Research) latest study, the global Roll Cooling and Lubrication System market size was valued at US\$ 1808 million in 2025 and is forecast to a readjusted size of US\$ 2524 million by 2032 with a CAGR of 5.1% during review period.

A roll cooling and lubrication system is an integrated industrial solution designed to control roll surface temperature and friction conditions during rolling processes by precisely delivering cooling water, emulsions, or lubricants to the roll–strip interface. These systems are widely applied in hot rolling, cold rolling, and finishing mills across steel and non-ferrous metal production lines to improve surface quality, dimensional accuracy, and roll life. In 2025, the average selling price of roll cooling and lubrication systems is approximately US\$95,000 per system, with global sales volume reaching around 18,500 systems. The industry maintains a gross margin of 35%–55%, supported by system-level integration, process customization, long equipment life cycles, and strong linkage to mill performance optimization.
