The label film is fed into the labeling machine, where it is printed with the desired design and cut to the appropriate size. The labels are then applied to the containers as they move along a conveyor belt.

Roll-fed label films can be printed using a variety of techniques, including flexography, offset printing, and digital printing. They can also be coated with various finishes, such as gloss or matte, to give the label a desired look and feel.

Roll-fed label film refers to a type of labeling material that comes in the form of a continuous roll. The label film is typically made of a thin, flexible plastic material such as polypropylene or polyester, which can be printed on and then cut to size. Roll-fed label films are commonly used in the packaging industry for labeling bottles, cans, and other types of containers. They are often preferred over other types of labels because they can be applied at high speeds using automated labeling machines.
