Roll-fed labels are commonly used in the packaging industry for labeling bottles, cans, and other types of containers. They are often preferred over other types of labels because they can be applied at high speeds using automated labeling machines.

The roll of label material is fed into a labeling machine, where the labels are printed with the desired design and cut to the appropriate size. The labels are then applied to the containers as they move along a conveyor belt.

Roll-fed labels can be printed using various techniques, including flexography, offset printing, and digital printing. They can also be coated with various finishes, such as gloss or matte, to give the label a desired look and feel.

Overall, roll-fed labels are a cost-effective and efficient way to label large quantities of products quickly and accurately.

Roll-fed labels are a type of label material that comes in a continuous roll form. The labels are typically made of a thin, flexible plastic material such as polypropylene or polyester, which can be printed on and then cut to size.
