The global Roll Grooving Machine market size is expected to reach \$ 418 million by 2032, rising at a market growth of 4.0% CAGR during the forecast period (2026-2032).

A Roll Grooving Machine is a specialized tool used in the mechanical and plumbing industries for creating a groove near the end of a pipe. This grooving allows the pipe to be joined with other pipes or fittings using a grooved coupling. The process of grooving is commonly used for various piping systems, including water, fire protection, and HVAC (Heating, Ventilation, and Air Conditioning) systems.

In 2025, global Roll Grooving Machine production reached approximately 192 K units, with an average global market price of around US\$ 1,600 per unit.

The upstream segment supplies core raw materials such as cast iron, high-strength steel, and wear-resistant alloy materials, alongside key components including drive motors, hydraulic assemblies, precision grooving rollers, bearings, transmission parts, and electrical control units for mechanical processing and final assembly. Midstream manufacturers conduct precision machining, assembly, quality testing, and finished product commissioning. The downstream chain covers global distributors, construction material suppliers, and engineering contractors, serving end users in fire protection, HVAC, municipal water supply, and industrial piping sectors, with after-sales maintenance and spare parts supply as supporting downstream services.

Manufacturing costs are mainly driven by metal raw materials and high-precision core components, which account for the largest proportion, followed by mechanical processing labor, assembly work, and quality inspection costs. Additional expenses include factory operation overhead, packaging, cross-border logistics, basic product

iteration R&D, and industry certification fees. Electro-hydraulic and combo models incur higher costs for hydraulic systems and intelligent parts, while manual types feature simpler structures and lower material input, creating clear cost differences across product lines.

This report studies the global Roll Grooving Machine production, demand, key manufacturers, and key regions.
