## Abstracts

The global Roll Stabilization Systems market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Roll stabilization systems are fins or rotors mounted beneath the waterline and emerging laterally from the hull to reduce a ship's roll due to wind or waves. Roll stabilization systems have been around for a long time, but are typically known for being used on larger passenger ships and superyachts. However, with the dramatically increased comfort and usability stabilizers add to any boat, it has also left owners of small leisure vessels wanting these systems.

This report studies the global Roll Stabilization Systems production, demand, key manufacturers, and key regions.
