The roll to roll ALD system is a continuous thin film deposition equipment. By continuously feeding two rolls of flexible substrates into the system, it performs high-speed and efficient thin film growth based on atomic layer deposition technology. It is suitable for large-scale applications. Produces flexible electronic devices and films. The system enables a high-throughput and low-cost manufacturing process while maintaining precise control of film thickness with ALD technology. Its advantage is that it can significantly improve production efficiency and reduce production costs, while maintaining the high uniformity and excellent film quality of ALD technology, providing reliable technical support for the large-scale production of flexible electronic products.
