## Abstracts

According to our (Global Info Research) latest study, the global Roll-to-Roll Printing market size was valued at USD 23220 million in 2023 and is forecast to a readjusted size of USD 34970 million by 2030 with a CAGR of 6.0% during review period.

In the field of electronic devices, Roll-to-roll processing, also known as web processing, reel-to-reel processing or R2R, is the process of creating electronic devices on a roll of flexible plastic or metal foil. In other fields predating this use, it can refer to any process of applying coatings, printing, or performing other processes starting with a roll of a flexible material and re-reeling after the process to create an output roll. These processes, and others such as sheeting, can be grouped together under the general term converting. When the rolls of material have been coated, laminated or printed they can be subsequently slit to their finished size on a slitter rewinder.

In 2017, North America led the roll-to-roll printing market for flexible devices, followed by Europe and Asia-Pacific. The U.S. held the largest share of the North American R2R printing market for flexible devices owing to the continuous technological development in the U.S., followed by Canada and Mexico.
