Abstracts

The global Rolled Feed Wheat market size is expected to reach \$ 1222 million by 2032, rising at a market growth of 6.7% CAGR during the forecast period (2026-2032).

Rolled Feed Wheat is a processed feed made by cleaning and conditioning (adjusting moisture) wheat grains and then pressing them into flakes or flat shapes through roller rolling equipment. Its core purpose is to destroy the seed coat and tissue structure of wheat, making the internal nutrients (such as starch and protein) easier for livestock and poultry to digest and absorb, while improving the palatability and processing adaptability of the feed. It is one of the commonly used energy feeds in animal husbandry.
