The roller bearing cage is a part used to fix and support the roller bearing, which can effectively reduce the wear and noise of the roller bearing, and improve the operating efficiency and life of the roller bearing. Roller bearings are a kind of bearings that use cylindrical or conical rolling elements to roll between the inner and outer rings to bear radial and axial loads. It has the advantages of high speed, high rigidity, and high load-carrying capacity. The structure of the roller bearing cage is generally composed of outer ring, inner ring, rolling elements, seals, etc., and its shape varies according to the type and quantity of rolling elements, such as single row, double row, three row, four row, etc. The material of the roller bearing cage is generally cast steel or cast iron, and its surface is treated with anti-corrosion to adapt to different working environments.
