According to our (Global Info Research) latest study, the global Roller Bearing and Air Bearing Electro-spindle market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The rolling bearing electric spindle has small frictional resistance, low power consumption, high precision, high rigidity, relatively low cost, and is convenient for serialization and standardization. Strong bearing capacity, suitable for larger loads. The air-bearing electric spindle is supported by 'air film', which has a compact structure and a small volume. The rotation accuracy and limit speed are higher than those of rolling bearing electric spindle and liquid sliding bearing electric spindle. It has low friction loss, low noise, good thermal stability, low pollution and long service life.
