The roller-bottom continuous furnace is an industrial furnace that transports workpieces by rotating a series of rollers in the furnace, so that the workpieces can complete heating, heat treatment and other processes during continuous movement. It usually consists of a furnace body, a heating system, a roller conveyor system, a control system and other parts. The workpiece is placed on the rollers, and as the rollers rotate, it passes through different temperature zones such as the heating zone and the insulation zone in turn, thereby achieving a continuous and efficient heat treatment process. This furnace has the advantages of high production efficiency, uniform heating, and a high degree of automation, and can meet the needs of large-scale industrial production.
