According to our (Global Info Research) latest study, the global Roller Hearth Kiln market size was valued at USD 413.5 million in 2023 and is forecast to a readjusted size of USD 1528 million by 2030 with a CAGR of 20.5% during review period.

The roller hearth kiln is a kind of tunnel kiln with a narrow and long section. Unlike the kiln car tunnel kiln, it is not operated by a kiln car loaded with products, so the kiln roof structure is a flat ceiling type. The 'roller table' is composed of rollers arranged in parallel and traversing the section of the working channel of the kiln. The products are placed on the roller table and transported into the kiln with the rotation of the rollers, and the firing process is completed in the kiln. Roller hearth kilns generally have a small cross-section and a uniform temperature in the kiln, which is suitable for rapid firing, but requires high roller material and installation technology. Mainly used for rapid firing of building sanitary ceramic products. A roller hearth kiln is a continuous firing kiln, and a tunnel kiln uses a rotating roller as a carrier for the green body. The product is placed on a few closely spaced horizontal refractory rollers, and the rotation of the rollers transports the ceramics from the kiln head to the kiln tail.

Global key players of roller hearth kiln include NGK Insulators, ONEJOON, Noritake, Riedhammer GmbH, Golden Furnace, etc. The top five players hold a share about 63%. Asia-Pacific is the largest market, has a share about 44%, followed by Europe and North America, with share 31% and 22%, separately.
