A roller pump, also commonly known as a peristaltic pump, is a type of positive displacement pump used for pumping a variety of fluids. The fluid is contained in a flexible tube fitted inside a circular pump casing. Most peristaltic pumps work through rotary motion, though linear peristaltic pumps have also been made.

Roller pumps device are positive displacement pumps which use rotating rollers pressed against special flexible tubing to create a pressurized flow. The tubing isolates the fluid from the rest of the pump and environment, eliminating contamination and making it ideal for handling aggressive, corrosive, or abrasive media. The roller mechanism also provides low shear pumping of the fluid for shear-sensitive fluids.
