According to our (Global Info Research) latest study, the global Rollfeed Granulator market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A rollfeed granulator is a machine used in the plastics recycling industry to transform plastic waste into granules or pellets. It consists of rotating rollers that crush and break down plastic materials into smaller pieces. These smaller particles are then forced through a screen to create uniform granules. Rollfeed granulators are designed to efficiently process various types of plastic waste, such as scrap, trimmings, or rejected products. The resulting granules can be used as recycled raw material in the production of new plastic products, reducing the need for virgin plastic and promoting a more sustainable approach to plastics recycling.

The industry trend in rollfeed granulators is driven by several factors. Firstly, there is an increasing global focus on environmental sustainability and circular economy practices, leading to a growing demand for efficient recycling technologies. Rollfeed granulators play a crucial role in the plastics recycling industry by enabling the conversion of plastic waste into reusable granules, aligning with these sustainability goals. Secondly, advancements in technology and automation are shaping the industry trend. Manufacturers are developing more advanced rollfeed granulators with improved efficiency, productivity, and ease of operation. These machines may incorporate features like automated feeding systems, enhanced cutting mechanisms, and intelligent controls for optimized performance.
