## Abstracts

The global Rolling Ball Face Slimming Device market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The rolling ball face slimming device is a beauty instrument usually used for facial massage and skin tightening. Its design is inspired by traditional Chinese medicine face-lifting massage techniques, combined with modern technology, using ball massage heads and electric vibration technologies. Roller ball face slimming devices usually have the following features and functions: Ball massage head: usually a ball made of metal or silicone, which can slide and rotate on the face to massage and stimulate facial skin. Electric vibration: The face slimming instrument has a built-in electric vibration device that can provide vibration massage at different frequencies, which helps promote facial blood circulation and accelerate metabolism. Heating function: Some high-end roller ball face slimming devices also have a heating function, which helps soothe facial skin and promote the absorption of nutrients by heating the facial skin. Firming and Lifting: Through massage stimulation, it can help facial skin tighten and lift, and reduce facial puffiness and relaxation. Roller ball face slimming devices usually require the use of massage cream, essence and other skin care products to enhance the massage effect and nourish the skin. When using it, generally follow the product instructions and gently massage the face, especially the chin, cheekbones and other parts to achieve the effect of slimming the face and lifting the skin.
