Abstracts

The global Rolling Mill Backing Bearings market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The rolling mill backing bearing is a rolling bearing specially developed for multi-roll cold rolling mills. Its outer ring is particularly thick and can be installed on a fixed support shaft and used as a backup roll or straightening roll. Rolling mill backing bearings mainly have the structural form of double-row or three-row cylindrical roller bearings, with or without integral ribs or retaining rings, full roller bearings (without cage) or bearings with cages. The rolling mill backing bearing can withstand both radial force and axial force, and its usage accuracy and life directly affect the performance of the rolling mill.

This report studies the global Rolling Mill Backing Bearings production, demand, key manufacturers, and key regions.
