Rolling stock gearbox lubricating oil is a special oil used to lubricate the gearboxes of trains, locomotives, and other rolling stock. These gearboxes are responsible for transmitting power from the engine to the wheels, and they require high-performance lubricants to protect the gears and bearings from wear and corrosion. Rolling stock gearbox lubricants are designed to provide excellent wear, corrosion, and oxidation protection, even under high loads and extreme temperatures. They typically contain high-quality base oils, such as synthetic or mineral oils, as well as a range of performance enhancing additives, such as anti wear, rust, and friction modifiers. In addition to providing excellent lubrication performance, locomotive and vehicle gearbox lubricants can also meet specific industry standards and regulations, such as those formulated by the American Gear Manufacturers Association (AGMA) and the European Committee for Standardization (CEN). These standards ensure that oil meets specific performance requirements and is compatible with the materials and components used in locomotive and vehicle gearboxes. Proper lubrication of rolling stock gearboxes is crucial to maintaining the reliability and performance of trains and locomotives, and the use of high-quality lubricants can help extend the service life of these critical components.
