Abstracts

The global Rollover Sensor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The rollover sensor is a sensor that detects the possibility of vehicle rollover during collision or other extreme driving operations. It is usually an electronic device that uses accelerometers or other sensors to detect changes in vehicle direction and angular speed. If the sensor detects that the vehicle is in danger of rollover, it will send a signal to the vehicle's safety system (such as the airbag system and the electronic stability control (ESC) system). These systems can then take measures to reduce the risk of rollover or mitigate the impact of rollover, such as deploying side curtain airbags or applying brakes to specific wheels.

This report studies the global Rollover Sensor production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Rollover Sensor, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
