According to our (Global Info Research) latest study, the global Room Temperature Curing Epoxy Agent market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A room temperature curing epoxy agent, or room temperature curing epoxy resin, refers to a type of epoxy resin system that cures and hardens at ambient temperatures without the need for additional heat. Epoxy resins are thermosetting polymers that consist of two main components: the epoxy resin itself and a curing agent (often referred to as a hardener). When these two components are mixed together in the correct ratio, they undergo a chemical reaction that results in cross-linking, transforming the resin from a liquid to a solid state.
