The global Root Canal Files and Reamers market size is expected to reach \$ 575.2 million by 2029, rising at a market growth of 3.3% CAGR during the forecast period (2023-2029).

Root Canal Files and Reamers also known as Endodontic files and reamers, are surgical instruments used by dentists when performing root canal treatment. These tools are used to clean and shape the root canal, with the concept being to perform complete chemomechanical debridement of the root canal to the length of the apical foramen. Preparing the canal in this way facilitates the chemical disinfection to a satisfactory length but also provides a shape conducive to obturation (filling of the canal).
