Rootstock seeds refer to the seeds used for rootstock reproduction. Rootstock refers to the trunk or part of the trunk that serves as the bottom in fruit tree grafting, used to provide roots and support. In fruit tree propagation, rootstock seeds are often used to cultivate rootstocks, and then the desired fruit tree varieties are grafted onto the rootstocks. Rootstock seeds are usually collected from mature rootstock trees. These seeds can be obtained through natural transmission or artificial collection. Once the seeds are obtained, they can be processed and stored to ensure their quality and shelf life.
