According to our (Global Info Research) latest study, the global Ropeless Elevator market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Ropeless elevators abandon the wire rope traction method of traditional elevators and adopt linear motor drive technology. Linear motors are devices that directly convert electrical energy into mechanical energy of linear motion. They can generate strong thrust along a specific track to drive the elevator car up and down. In the ropeless elevator system, electromagnetic devices are installed at the bottom and top of the car. When the linear motor is powered on, the magnetic field generated interacts with the electromagnetic device on the car to generate upward or downward thrust, allowing the car to run smoothly along the guide rail.
