According to our (Global Info Research) latest study, the global Ropeless Fishing Systems market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Ropeless fishing systems refer to innovative fishing technologies that aim to reduce or eliminate the use of traditional vertical ropes or longlines in commercial fishing operations. These systems typically utilize a combination of electronic communication, remote sensing, and GPS technology to enable the deployment and retrieval of fishing gear without the need for continuous vertical lines. Instead, fishing traps or pots are equipped with an acoustic or radio-controlled release mechanism. When it's time to retrieve the gear, a signal is sent to the release mechanism, causing it to detach from the trap or pot, allowing for its recovery. Ropeless fishing systems are designed to address concerns related to accidental entanglements of marine mammals and other non-target species, improve gear efficiency, and reduce environmental impacts associated with traditional fishing methods.
