The rotary arm packaging machine is a highly efficient automated packaging equipment that uses a rotary arm structure to wrap, film or bag products. It is suitable for scenarios such as pallet cargo fixation, food preservation, and industrial product dust prevention. Its core function is to adjust the rotary arm speed, tension, and number of wrapping layers through a programmable logic controller (PLC) to achieve stable packaging and adapt to cylindrical, square and other special-shaped items. Advantages include saving consumables (such as reducing film usage by 20%), improving efficiency (up to 60 pallets/hour), and compatibility with materials such as heat shrink film and PE stretch film.
