The rotary auger filler is a highly automated filling equipment that combines the continuous production of the rotary filling machine with the fluid propulsion mechanism of the screw filling machine. During the filling process, the packaging container (such as bottles, cans, etc.) rotates at a constant speed in the circumferential direction. At the same time, the screw propeller driven by the motor gradually pushes the fluid material (such as liquid, colloid, etc.) into the container, completing the process of filling operations.
