The rotary bottle making machine is an automated equipment used for the efficient production of glass bottles and other containers. It adopts a turntable design and completes the glass bottle forming process through continuous work of multiple stations. The machine first feeds molten glass droplets into the mold, and after pressing and forming, it forms the bottle body by blowing or other mechanical methods. The rotary bottle making machine is characterized by high production efficiency, high degree of automation, and the ability to produce glass bottles of various specifications and shapes. It is widely used in the production of bottled containers in the food, beverage, pharmaceutical and cosmetic industries.
