The rotary disc valve is a key device for industrial fluid control. It regulates, opens or closes the flow of fluid through a rotatable disc. Its design is compact and suitable for high temperature, high pressure or corrosive media environments. The rotary disc valve is widely used in the chemical, petroleum, pharmaceutical and energy industries for its strong sealing and adjustment capabilities. Its main components include the valve body, valve seat and disc. When working, the disc is rotated by the drive device to change the opening of the fluid channel, thereby achieving precise flow control or complete cutoff. The rotary disc valve can withstand harsh working conditions, has a long service life and low maintenance costs, especially in operations with high reliability requirements.
