## Abstracts

According to our (Global Info Research) latest study, the global Rotary Friction Welding Machine market size was valued at USD 208.9 million in 2023 and is forecast to a readjusted size of USD 277 million by 2030 with a CAGR of 4.1% during review period.

Rotary friction welding is a solid-state joining process. The technique, also known as spin welding, involves one part to be joined being spun at high speeds and pressed against the other part to be joined, which is held in a stationary position. The resulting friction heats the parts to a temperature at which they can join together, at which point the rotational force is removed and the two parts are pushed together while they cool.
