The rotary iron remover is improved based on the grid type iron remover (drawer type iron remover, box type iron remover). Bridging, blocking, etc. It is widely used in the fine chemical industry to filter iron impurities in powder materials.

The rotary iron remover is mainly composed of three parts: a magnetic core, a stainless steel shell and a geared motor. The magnetic core is composed of a strong magnetic rod, and the shell is made of stainless steel. The geared motor can be selected according to the different models of the iron remover and the different conditions of the materials to be processed.
