Rotary Kiln is a long steel cylinder with a refractory lining, supported on rollers so that it can rotate about its own axis, and erected with a slight inclination from the horizontal so that prepared raw materials fed into the higher end move to the lower end, where fuel is blown in by air blast. It is often used to treat hazardous waste through thermal destruction.

In our report, the price of products have big difference due to the product size, and the material, metal almost decide the price of a unit of rotary kiln, therefore, we statistic the Rotary Kilns' volume by weight.
