The global Rotary Moveable Potentiometer market size is expected to reach \$ 2228.4 million by 2029, rising at a market growth of 5.2% CAGR during the forecast period (2023-2029).

The variable resistor market has seen significant growth and change in recent years. Variable resistors, also known as Potentiometers, are important in the electronics industry because they provide adjustable resistance to control voltage in different applications. Technological advancements, increasing demand for electronic equipment, and demand for precise voltage control across industries drive the growth of the market. As electronic devices become more advanced and smaller, smaller but more accurate potentiometers are required. This has led to the development of innovative designs that cater to a variety of applications. Technological advances have led to the development of advanced potentiometer designs that are more accurate, durable and reliable. These advances address the growing electronics industry's need for smaller, more efficient potentiometers. Devices such as smartphones, tablets, wearables, IoT devices, and smart appliances require precise voltage regulation. The growing demand for electronic equipment in various industries is also contributing to the growth of the potentiometer market. Potentiometers are widely used in devices and systems in industries such as consumer electronics, automotive, aerospace, telecommunications, and industrial automation. They are used for functions such as volume control, brightness adjustment, motor control, and signal conditioning. Growing trends in automation and IoT devices are expected to drive the potentiometer market. As automation becomes more prevalent in industry and smart devices become more prevalent in homes and workplaces, the need for potentiometers will increase significantly to enable precise and adjustable control in these systems .

Rotary moveable potentiometer is a rotary-movable electrical resistor with adjustable resistance. Rotating a knob or dial attached to the shaft causes the internal wiper to sweep around a curved resistive element.
