The global Rotary Online Viscometer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The principle of the rotary online viscometer is to rotate the object entering the fluid to be measured, or keep the object stationary, and when the fluid around the object is rotated and flowed, due to the shear stress, the objects in these fluids will be viscous. The effect of torque. If the conditions such as rotation are the same, the size of the viscous moment will change with the change of the viscosity of the fluid. By measuring the size of the viscous moment, the viscosity of the fluid can be calculated according to the viscosity formula.
