The rotary spring energized seal is a sealing element designed for rotating equipment. It adopts a built-in spring structure and continuously provides sealing pressure through the elastic force of the spring to compensate for the change in the sealing surface gap caused by factors such as wear or thermal expansion. This seal is widely used in rotating equipment such as bearings, pumps, and mechanical seals. It can effectively prevent fluid leakage and maintain the sealing effect. It is particularly suitable for sealing needs under high temperature, high pressure and dynamic working conditions.
