According to our (Global Info Research) latest study, the global Rotary Switches market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A rotary switch is a switch that is operated by turning rather than flipping or pushing. The switches were common in devices that needed to provide a wide array of options rather than the two or three provided by the other switch types. A rotary switch consists of a single pin, called a rotor, which has one or more flat wheels connected to it, called decks. When a user turns a knob, the rotor turns the decks and changes the way they connect to the device. This creates a wide array of different possible settings.

Global Rotary Switches key players include Grayhill, CandK Components, Apem, EAO, Carling Technologies, etc. Global top five players hold a share about 45%.
