The global Rotary Switches market size is expected to reach \$ million by 2032, rising at a market growth of %CAGR during the forecast period (2026-2032).

A rotary switch is a switch that is operated by turning rather than flipping or pushing. The switches were common in devices that needed to provide a wide array of options rather than the two or three provided by the other switch types. A rotary switch consists of a single pin, called a rotor, which has one or more flat wheels connected to it, called decks. When a user turns a knob, the rotor turns the decks and changes the way they connect to the device. This creates a wide array of different possible settings.

Global Rotary Switches key players include Grayhill, CandK Components, Apem, EAO, Carling Technologies, etc. Global top five players hold a share about 45%.

Europe is the largest market, with a share about 35%, followed by North America and China, having a total share about 40 percent.

In terms of product, Single-deck Rotary Switches is the largest segment, with a share about 35%. And in terms of application, the largest application is Commercial Application, followed by Military Application, Aerospace Application, Industrial Application, Healthcare Application.
