According to our (Global Info Research) latest study, the global Rotary Uninterruptible Power Supply market size was valued at USD 724.1 million in 2023 and is forecast to a readjusted size of USD 959.6 million by 2030 with a CAGR of 4.1% during review period.

An uninterruptible power supply or uninterruptible power source (UPS) is an electrical apparatus that provides emergency power to a load when the input power source or mains power fails. A UPS differs from an auxiliary or emergency power system or standby generator in that it will provide near-instantaneous protection from input power interruptions, by supplying energy stored in batteries, supercapacitors, or flywheels. The on-battery run-time of most uninterruptible power sources is relatively short (only a few minutes) but sufficient to start a standby power source or properly shut down the protected equipment. It is a type of continual power system.
