## Abstracts

The global Rotary Welding Table market size is expected to reach \$ 48.32 million by 2032, rising at a market growth of 5.3% CAGR during the forecast period (2026-2032).

In 2025, global sales of rotary welding tables reached 480 units, with an average selling price of US\$68,500 per unit. Total production capacity was approximately 650 units, and the gross profit margin remained around 32%. Rotary welding tables are specialized equipment used in industrial welding processes. Through a controllable rotating platform, they achieve continuous rotation and positioning of the workpiece, ensuring uniform welds, high welding precision, and improved production efficiency. They are widely used in welding petrochemical pipelines, pressure vessels, ships, mechanical parts, and automotive exhaust systems. Upstream raw materials mainly include high-strength steel, speed reducers and servo motors, welding control systems, and structural components; consumption is closely related to production volume. Downstream suppliers primarily include petrochemical companies, pressure vessel manufacturers, and ship and mechanical parts manufacturers.

In the future, with the increasing demand for industrial automation, intelligent manufacturing, and high-precision welding, the rotary welding table market will maintain stable growth. Business opportunities mainly focus on high-precision control, increased load capacity, intelligent monitoring, and modular design. Meanwhile, upstream material optimization and drive system upgrades will become key directions for improving equipment performance and reducing costs.

This report studies the global Rotary Welding Table production, demand, key manufacturers, and key regions.
