Abstracts

Rotating Anode X-ray Tubes is Tubes during operation, a large disk-shaped tungsten anode is rotated at high speed (3000 to 9000 revolutions per minute). The motive force for the rotation is provided by an induction motor the windings of which are housed outside the tube. Although the focal spot of the electrons impinging on the anode is no larger than that in a tube with a stationary anode, the effective area of the anode exposed to the beam is much larger.

According to our (Global Info Research) latest study, the global Rotating Anode Tube market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
