The global Rotating Couplers for Excavator market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Rotating couplers for excavators, also known as rotary couplers or swivels, are hydraulic attachments designed to allow the continuous rotation of excavator attachments, such as buckets, grapples, or other tools. These couplers enable the excavator operator to rotate the attachment in a full 360 -degree motion, providing increased flexibility and efficiency in various construction and excavation tasks. The rotating coupler is mounted between the excavator arm and the attachment, allowing for seamless rotation without the need to reposition the entire machine.
