A Rotating Vane Wet Type Water Meter is a type of water meter that measures water flow by the rotation of a vane. Water flow impacts the vane, causing it to rotate, and the meter calculates the water flow rate based on the rotation speed. Rotating Vane Wet Type Water Meters are characterized by simple structure, high reliability, and low cost, making them suitable for various applications such as residential areas, commercial buildings, and industrial parks.

The rotor wet water meter industry is in a stage of stable development. Although various new water meters have appeared in recent years, rotary wet water meters still occupy an important market share with their mature technology, reliable performance and low price. In the future, the rotor wet water meter will show the following development trends:

High precision, low power consumption and long life: metering technology will be continuously optimized to improve metering accuracy, reduce power consumption and extend service life.

Intelligent upgrade: the rotary wet water meter will be combined with the Internet of Things technology to achieve remote meter reading, remote control, water leakage monitoring and other functions to improve the efficiency of water resources management.

Standardization and connectivity: Relevant standards and protocols will continue to improve, promote product standardization and connectivity, and achieve data sharing and information integration.

Environmentally friendly material application: Manufacturers will pay more attention to the application of environmentally friendly materials to reduce the impact on the environment.
