Abstracts

The global Rotomolded Cooler Box market size is expected to reach \$ 3256 million by 2032, rising at a market growth of 7.4% CAGR during the forecast period (2026-2032).

In 2025, global sales of Rotomolded Cooler Box reached 13.2 million units, with an average selling price of \$145 per unit. Total global production capacity stood at approximately 16.5 million units per year, and the industry's average gross profit margin was around 28%. Rotomolded Cooler Boxes are manufactured by heating plastic raw materials within a rotating mold to form a container featuring a uniform internal and external insulation layer. Primarily utilized in sectors such as food cold-chain transport, pharmaceutical and vaccine logistics, seafood preservation, and general distribution, these boxes are characterized by high strength, lightweight construction, superior thermal insulation, and strong impact resistance.

Upstream suppliers provide polyethylene (PE) resins, foaming agents, mold steels, insulation fillers, and surface coating materials, while downstream markets consist of cold-chain logistics providers, food delivery companies, pharmaceutical transport agencies, and seafood processing enterprises. Market demand continues to expand, driven by the accelerated development of global cold-chain logistics systems, stricter regulations regarding food safety and vaccine transport, and rising consumer demand for fresh food delivery. Future product development will focus on lightweight designs, enhanced thermal insulation performance, modularity, and smart temperature monitoring; meanwhile, the expansion of cold-chain infrastructure in emerging markets and the growth of pharmaceutical cold-chain logistics will create significant business opportunities for the industry.
