According to our (Global Info Research) latest study, the global Rotor Dumper market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Rotor dumper is one of the components of the unloading machine. Unloaders mainly include dumpers, screw unloaders, chain bucket unloaders, etc. The rotor type dumper is composed of a rotor, a clamping device, a supporting device and a rotary drive device. The rotor carries the carriage and rotates the revolving body, which is composed of an end ring, a platform, front and rear trusses and backing plates. The clamping device ensures that the carriage does not derail during the rotation process. It consists of clamping hooks fixed on the front and rear trusses and driven by hydraulic pressure or wire ropes. During the turning process of the dumper, the carriage is clamped by the clamping hook.
