The global Rotor Dumper market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Rotor dumper is one of the components of the unloading machine. Unloaders mainly include dumpers, screw unloaders, chain bucket unloaders, etc. The rotor type dumper is composed of a rotor, a clamping device, a supporting device and a rotary drive device. The rotor carries the carriage and rotates the revolving body, which is composed of an end ring, a platform, front and rear trusses and backing plates. The clamping device ensures that the carriage does not derail during the rotation process. It consists of clamping hooks fixed on the front and rear trusses and driven by hydraulic pressure or wire ropes. During the turning process of the dumper, the carriage is clamped by the clamping hook.

This report studies the global Rotor Dumper production, demand, key manufacturers, and key regions.
