According to our (Global Info Research) latest study, the global Rotor Multi-flow Dry Type Remote Transmission Water Meter market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The rotor multi-flow dry-type remote transmission water meter is a smart water meter that can achieve long-distance meter reading and water leakage monitoring through non-magnetic acquisition and NB-IoT communication technology. Its characteristics are: the counting mechanism is isolated from the water being measured, is not affected by impurities in the water, and the reading is clear. The distribution function of the impeller box makes multiple streams of water flow tangentially impact the impeller, reducing the wear of the impeller support part and improving the measurement accuracy. Anti-magnetic interference, supports lead sealing, and has theft alarm function. The error adjustment device is an external adjustment type, which is convenient for adjustment.
